

Let the evidence explain it.

Water damage can raise questions about contamination, affected materials, decontamination work and drying progress.

An independent technical inspection helps define the question, document available conditions and explain what the findings support.

Questions worth asking

- What conditions are documented?
- What do measurements and samples mean in this setting?
- What supports the proposed recommendation?
- What remains uncertain or needs more investigation?

Conclusions should reflect the evidence, regardless of who commissions the assignment.

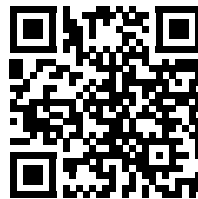

Talk with Ken.

Have the property location, loss date, current restoration stage, deadline and the questions you need answered ready.

DSi

DRYSTANDARD INSPECTIONS

Know what the evidence supports.

Water category testing.
Independent inspection.
Clear technical documentation.

PART OF THE IDSO FAMILY

Inspection with a defined purpose.

Water contamination

Testing and reporting to help evaluate the degree of contamination in the agreed inspection scope.

Decontamination work

Observations and sampling to help evaluate the work before the next restoration phase.

Drying documentation

Record and interpret moisture measurements as restorative drying progresses.

Technical review

Examine project records, technical findings and questions about a proposed restoration scope.

Methods and timing are selected for the assignment. A single result is part of the evidence; it needs context.

A record you can follow.

01

Observe

Define the question. Document the property history, affected materials and conditions available for inspection.

02

Collect

Agree on relevant measurements and sampling. Record methods, locations, timing and comparison information.

03

Interpret

Consider findings together with the property context. Explain what the evidence supports and its limitations.

04

Document

Connect observations and results to conclusions and recommendations in the agreed report.

The result needs an explanation.

Your agreed report

A clear scope, relevant observations and results, technical interpretation, and the limits of the available evidence.

Independent judgment

Findings follow the evidence, regardless of the commissioning party. An inspection does not promise a claim settlement.

Before authorizing work

Review the project-specific quote and current agreement. Payment is required before report release. Insurance reimbursement is not a condition of the client's payment obligation.
